

Each sectional frame has holes and adjusting pins which can be used to compensate for any unevenness in the sub-floor. We have affixed special felt strips underneath every dance floor element, firstly to protect your floor and secondly to optimise its grip on the sub-floor.

Finally, the appropriate light-metal edging (gold-anodized) is fitted to the outer edges. This is done just as easily as the connection of the individual elements. The bevelled section looks good, is non-slip thanks to its grooved surface, and hence helps to keep your guests safe.

„May I have this dance?“

Lay your own mobile oak parquet dance floor in next to no time

Easy handling when laying the dance floor segments.

Our mobile dance floors have been providing their worth all over the world for many years now. In no time at all, you can put on splendid balls in your hall or building. This makes the mobile dance floor an additional money spinner.

The sturdy dance floor segments are made from high-quality oak parquet.

The benefit for you: You decide what size you want, with the elements measuring 95 x 95 cm.

Its weight, its ingenious connecting system and its high-quality workmanship make it hard to detect that this is a mobile dance floor.

Our dance floors together with their edging sections are stowed on a practical transport trolley.

Let's dance!

3 steps to the finished dance floor

Step 1 - Laying:

Lay out the elements (18 kg each) in your hall. Our solid oak parquet floors are 27 mm thick and easy to handle.

A light-metal sectional frame with pressed-in corner sections ensures high stability, high strength and complete edge protection.

Each sectional frame has holes and adjusting pins which can be used to compensate for any unevenness in the sub-floor. We have affixed special felt strips underneath every dance floor element, firstly to protect your floor and secondly to optimise its grip on the sub-floor.

Step 2 - Locking:

The elements are locked to one another using a socket spanner.

This is done effortlessly and quickly – only a half-turn is needed.

Step 3 - Edging:

Finally, the appropriate light-metal edging (gold-anodized) is fitted to the outer edges. This is done just as easily as the connection of the individual elements. The bevelled section looks good, is non-slip thanks to its grooved surface, and hence helps to keep your guests safe.

Transport trolley

You can store and transport your dance floor elements in the practical transport trolley provided for them. It has room for up to 25 elements plus their edging sections.

Space-saving and tidy storage on the strong transport trolley.
